# ComplyScan Viewer (CS/V)

AWS Customers are in constant search of simple and easy ways to monitor and report on their Disaster Recovery, Data Restore and Data Compliance risks in the cloud. AWS Backup and its Backup Audit Manager (BAM) provide excellent reporting and compliance tools.

The *ComplyScan Viewer* (CS/V) freemium SaaS tool increases these capabilities by adding functionality and visibility currently not supported by AWS Backup and BAM. CS/V maintains consistency with AWS Backup, BAM and other AWS Storage backup tools. CS/V provides important value on top of these services to help customers automate, scale and allow human operators more freedom to tackle other cloud projects.

The customizable CS/V graphical user interface and wizard-driven installation helps provide increased AWS Backup visualization while adding sophisticated AWS Backup cross account/cross-region threshold alerting, notifications and Slack integration capabilities. Optional cost-effective upgrades are available for EC2/EBS snapshot validation capabilities and more.
